Documentation of Campaign Letters Received

Sample Campaign Letter 1

From:

To: Mickal, Sean P MVN

Subject: Properly Close the Mississippi River Gulf Outlet

Date: Tuesday, September 04, 2007

Mr. Sean Mickal
U.S. ARMY CORPS OF ENGINEERS, PM-RS
P.O. BOX 60267
New Orleans, LA 70160-0267

Dear Mr. Mickal,

I urge the Corps of Engineers to ensure that its final closure plan for the Mississippi River Gulf Outlet (MRGO) goes well beyond the very limited ecosystem restoration proposed in the draft report. The closure plan should also rebuild a wetland buffer for the fragile earthen levees that have just been patched along the channel bank, and build additional compartmentalization into the channel itself to hasten the healing process and significantly reduce the risk of future breaches and surge.

Hurricane Katrina devastated lives all along the Gulf Coast, but the storm itself was only partly to blame for the flooding of New Orleans. The MRGO greatly worsened flooding in New Orleans and St. Bernard Parish by funneling Katrina's storm surge, which increased the height and speed of the water that shot into New Orleans. Creating and maintaining the MRGO also destroyed more than 20,000 acres of coastal wetlands that could have reduced Katrina's storm surge and spared lives.

To address storm surge, the Corps must require a number of additional lateral constrictions or closures across the MRGO channel that would effectively turn the now open channel into a series of pools. These constrictions would reduce the channel's ability to increase storm surge and speed up water velocity. The lateral closures would also reduce the amount of flooding from the MRGO in the event of any future levee breaches, and would facilitate the natural filling in of the channel.

To help protect against future levee breaches, the Corps should also reclaim the original bank lines of the MRGO at least in front of the MRGO levees, and plant the reclaimed land with dense native vegetation. Without these actions, the MRGO will continue to pose a significant and unacceptable threat to New Orleans. I urge you to ensure the safety of Louisianans by adopting a plan that will properly close the Mississippi River Gulf Outlet.

Sincerely,

Sample Campaign Letter 2

From:

To: Mickal, Sean P MVN;

Subject: MRGO Closure Plan and Legislative EIS Must Address Storm Surge

Date: Tuesday, September 04, 2007

Mr. Sean Mickal
P.O. Box 60267
New Orleans, LA 70160-0267

Dear Mr. Mickal,

I urge the U.S. Army Corps of Engineers to ensure that the final closure plan for the Mississippi River Gulf Outlet (MRGO) reduces the very serious storm surge risks posed by the MRGO. The future of Greater New Orleans hinges on stopping this unacceptable threat. Hurricane Katrina devastated lives all along the Gulf Coast, but the storm itself was only partly to blame for the flooding of New Orleans. The MRGO greatly worsened flooding in New Orleans and St. Bernard parishes by funneling Katrina's storm surge, which increased the height and speed of the water that shot into New Orleans. Creating and maintaining the MRGO has also destroyed more than 20,000 acres of coastal wetlands that could have reduced Katrina's storm surge and spared lives.

I strongly support the proposal in the Corps' draft integrated final report to Congress and legislative environmental impact statement to curtail continued losses of coastal wetlands by minimizing the amount of saltwater reaching those wetlands through the MRGO. Constructing the MRGO destroyed thousands of acres of wetlands and severed the Bayou la Loutre ridge, a natural barrier to saltwater intrusion from the Gulf of Mexico into Lake Borgne. Since then, the MRGO has continued to feed saltwater into freshwater marshes and forests, resulting in extensive degradation. These wetlands will disappear at an alarming rate, further diminishing their capacity to buffer storms, shelter wildlife and purify water, as long as the MRGO exists.

However, the proposed plan is seriously deficient as it does not reduce the ability of the MRGO channel to increase the height and speed of storm surge. Scientists from Louisiana State University (LSU) estimate that the wall of water that hit New Orleans moved at 8-10 ft/sec through sections of the MRGO -- 3 to 4 times faster than it would have over natural wetlands. This caused rapid and catastrophic flooding that, tragically, was very difficult to escape. LSU's models show that even after levee and floodwall repairs, the MRGO channel will continue to pose a significant and unacceptable threat to the Greater New Orleans area from future hurricanes.

This draft plan for the MRGO calls for only one closure at Bayou la Loutre, which will primarily address saltwater intrusion. To address storm surge for all communities, the Corps must require a number of additional lateral constrictions or closures across the MRGO channel that would

effectively turn the now open channel into a series of pools. These constrictions would reduce the channel's ability to increase storm surge and speed up water velocity. The lateral closures would also reduce the amount of flooding from the MRGO in the event of any future levee breaches, and would facilitate the natural filling in of the channel. To help protect against future levee breaches, the Corps should also reclaim the original bank lines of the MRGO at least in front of the MRGO levees, and plant the reclaimed land with dense native vegetation. Without these actions, the MRGO will continue to pose a significant and unacceptable threat to Greater New Orleans.

I implore you to ensure the safety of Louisianans by adopting a plan that will properly close the MRGO.

Sincerely,

Following is a list of individuals who sent either Campaign Letter 1 or 2 (or slight variations thereof).
